Letter of Self Introduction

About me

Hello. My name is SongYi Choi. One day I met a friend who is a developer. After I talked with her, I became very intrigued in programming. Since that day, I have started studying programming. And I recognized I like to make something by using programming language. I find the process of making, designing and solving problem (debugging) very interesting. Especially successful debugging gives me the most pleasure. I think as a web developer, I should keep studying programming and improve my programming skills. I am a person who has efficient communicating skill and enjoys learning new things. I want to be a nice developer who can make clean code, and also a coworker that can create a positive environment for those around me. Thank you :)

Professional activities

[Specialist mind]

2016.03 - 2016.06 KEMP LAW / Brisbane / Intern

When lawyers have a new case, I have arranged documents classification. At first few months I only did file classification. After that they ask me can I design letter head, name card, web page. I accepted. And among them letter head was changed. Through this experience I could learn that carrying out my duty faithfully will give another chance.

2018.09 - 2018.11 Seum Planet / Seoul / Employee

I communicated with advertiser and made an advertising proposal. One of tasks is making blog contents using selecting keyword. I usually choose keyword that searching quantity is not too high, not too low. Because key point of keyword marketing is exposing. This method that is based on expertise gave me result. So I could get advertiser's satisfaction.

2018.12 - Present Cafe Modoo / Ansan / Manager

I did my job, for example providing service, selling, making beverage, managing stock and income of cafe. One day, one customer spoke impolitely to me. But I answered more kindly. After when he left he said thank you. Then while working I could feel that good service can change customer's attitude

Personality

[Prepared responsibility]

I do my best on what I am in charge of. When I worked for Danwon art museum as an intern, I sent to museum members e-mail to visit summer planning exhibition. And furthermore, I contacted Facebook page and online press myself. As a result, a lot of people came to enjoy exhibition so I achieved museum's goal selling ticket 200 million won. After finished intern period, when they need someone to work asked me work again. I believe that my sense of responsibility helps me keep advancing service skill. That will make me a capable ground staff who can catch well customer's needs.

On the other hand I have a problem worrying about beginning new work. To overcome this trouble I try to prepare perfectly. So when I worked for CGV multi flex, I spent time to remember all of manual, snacks recipe, discount information everyday after being CGV worker. Finally I got the best score in first appraisal within colleague. I would like to be a ground staff who has problem solving ability making full use of preparation
